

## AZ-500T00 Microsoft Azure Security Technologies

Class Length: 4 Days
Overview —
In this course students will gain the knowledge and skills needed to implement security controls, maintain the security posture, and identify and remediate vulnerabilities by using a variety of security tools. The course covers scripting and automation, virtualization, and cloud N-tier architecture.
Prerequisite Comments —
Before attending this course, students must have knowledge of: Microsoft Azure Administrator Associate
Target Audience —
Students should have at least one year of hands-on experience securing Azure workloads and experience with security controls for workloads on Azure.
Course Objectives —
After completing this course, students will be able to: Describe specialized data classifications on Azure Identify Azure data protection mechanisms Implement Azure data encryption methods Secure Internet protocols and how to implement them on Azure Describe Azure security services and features
Course Outline —
1 - Identity and Access
Configure Azure Active Directory for Azure workloads and subscriptions Configure Azure AD Privileged Identity Management Configure security for an Azure subscription
2 - Platform Protection

Understand cloud security

Build a network
Secure network
Implement host security
Implement platform security
Implement subscription security

## 3 - Security Operations

Configure security services
Configure security policies by using Azure Security Center
Manage security alerts
Respond to and remediate security issues
Create security baselines

## 4 - Data and applications

Configure security policies to manage data Configure security for data infrastructure Configure encryption for data at rest Understand application security Implement security for application lifecycle Secure applications Configure and manage Azure Key Vault
